

Liquamelt™ Delivery Systems

•

Liquamelt's delivery system is simple to operate and easy to maintain.

•

The material delivery system is modular and will accommodate from one to four hoses per unit and can be configured for hand or automatic applications.

•

The Liquamelt adhesive is delivered to our patented Turbomelter at room temperature eliminating the need for conventional hot melt tanks and heated hoses. This Cool on Delivery – Hot on Demand technology reduces energy consumption by up to 75% while providing for a safer work environment.

•

Tired of waiting an hour for system start-up? The Liquamelt system is operational from cold start up in approximately 5 minutes.
